

Blaeu made a number of both terrestrial and celestial globes of 340 and 353 mm and it is possible that the *Batavia* globe-ring could have been for either type. Navigational items found on the *Batavia*, but not included in the Resolutions of 1655, include a brass globe-ring and a brass protractor. The globe-ring is 355 mm in diameter. It is interesting to note that the VOC ships of this time may have been using globes for navigational purposes. Certainly Coen, on his voyage to the Indies in 1627, noted that Eendrachtsland was incorrectly placed on the terrestrial globe.
