

HURST LANE RESERVOIR (Cambridgeshire)

TL 52 80

Hurst Lane reservoir lies on the Isle of Ely, Cambridgeshire that is a land-locked island surrounded by marsh and overlays the gravel terrace (Evans *et al.* 2007, 41-42). Cambridge Archaeological Unit carried out rescue excavations between July and September 1999 at the site and investigated nearly 2.85 ha (Evans *et al.* 2007). The excavation revealed two Iron Age settlement areas that consist of a number of roundhouses with many of the features dating to the Middle/Late Iron Age (Evans *et al.* 2007, 44). Additionally, the excavations uncovered some human remains of which four disarticulated bones securely date to the Middle/Late Iron Age (Dodwell 2007a, 66). Natasha Dodwell conducted the osteological analysis (2007a).
