List of figures	xiii
List of tables.....	xix
Abstract.....	xxi
1 Introduction	1
1.1 The Great East Window of York Minster	1
1.1.1 Glass-making technology and acquisition	1
1.1.2 The organisation of stained glass window production.....	3
1.2 Challenges in the study of medieval stained glass by materials science methods	3
1.2.1 Trace element methodology.....	3
1.2.2 Interference of lead cames	4
1.3 Overview	4
2 The Great East Window of York Minster.....	7
2.1 York in 1400	7
2.2 Construction of the window	9
2.3 York Minster Revealed	10
2.3.1 Composition, Corrosion and Origins of Medieval Window Glass: The Cardiff-York project	11
2.3.1.1 Samples from the project.....	11
2.4 Summary: A window of opportunity	11
3 Glass-making in the medieval period	13
3.1 Medieval treatises on glass-making.....	13
3.2 The chemical composition of medieval forest glass.....	15
3.2.1 Factors affecting the chemical composition of medieval glass.....	15
3.2.2 Transition to high lime, low alkali (HLLA) glass.....	16
3.3 Colour technology	17
3.3.1 Control over the furnace and redox conditions.....	17
3.3.2 Addition of colourants to the melt	17
3.3.3 Flashed glass and other composite glasses	18
3.4 Possible sources for the GEW glass	19
3.5 Regional trends in glass composition: Synthesis of previous analytical work on medieval European glass.....	20
3.6 The GEW and glass-making technology	23
4 Medieval glass-painting.....	27
4.1 Medieval treatises on glass-painting.....	27
4.2 Cartoons and glazing tables.....	29
4.3 Medieval craft guilds and glass-painting.....	30
4.4 Workshop practice	31
4.5 A multidisciplinary approach.....	32
5 Problems and possibilities: Using handheld pXRF to study medieval stained glass windows	35
5.1 An introduction to handheld pXRF	35
5.1.1 The basic principles behind XRF analysis.....	35
5.1.2 Handheld (portable) XRF: Practical considerations	35
5.1.2.1 The sample material.....	36
5.1.2.2 Instrumental settings.....	36
5.1.2.3 Quantification	37
5.1.2.4 Performance, problems and potential	38

5.2	Handheld pXRF in archaeology and cultural heritage	38
5.2.1	The English Heritage Historic Window Glass project.....	39
5.3	Surface conditions of medieval stained glass.....	40
5.3.1	Composition and corrosion of medieval stained glass	40
5.3.2	Decorative details: grisaille and silver stain	43
5.3.2.1	Grisaille	43
5.3.2.2	Silver stain	43
5.4	The interference of lead came	44
5.5	Developing a methodology for the study of medieval stained glass windows by handheld pXRF	45
6	Methods	47
6.1	Materials and sampling.....	47
6.1.1	Great East Window, York Minster	47
6.1.2	The Cardiff-York project: Data and samples	48
6.1.2.1	Little Birches Wolseley, Staffordshire	49
6.1.2.2	St William Window, York Minster.....	49
6.2	Analytical methods	49
6.2.1	Handheld pXRF analyses	49
6.2.2	Electron microprobe analyses.....	51
6.2.3	OM and SEM imaging.....	52
6.2.4	Laser ablation ICP-MS analyses.....	52
6.2.5	Isotope ratio analyses	54
6.2.6	Development of glass calibration standards	54
6.3	Tests for methodological development	55
6.3.1	Elements affected by surface conditions.....	55
6.3.2	The interference of lead came on in situ analysis	55
6.4	Identification of glass batches.....	55
6.5	Summary of the research methods.....	56
7	Performance of handheld pXRF in the analysis of medieval stained glass.....	57
7.1	Trace element methodology.....	57
7.1.1	pXRF performance on standards and medieval glass	57
7.1.2	Deterioration and the depth of analysis	63
7.1.3	Trace elements in medieval forest glass	65
7.2	Bypassing the interference of lead came.....	66
7.2.1	Comparison of in situ and test stand analyses by pXRF	66
7.2.2	Analysis of glass at increasing distances	66
7.2.3	Comparison of empirical calibrations	66
7.2.4	Factors affecting the measured intensity with increased working distance	69
7.2.5	Development of an attachment for in situ window analysis, the WindoLyzer 5	72
7.2.6	Health & Safety	72
7.3	Summary	76
8	Chemical characterisation of the Great East Window glass.....	79
8.1	Characterising major glass types	79
8.1.1	Identification of original and non-original glass.....	80
8.2	Glass original to the window	81
8.2.1	The original white glass.....	82
8.2.1.1	Comparison with Staffordshire glass.....	82
8.2.2	The original blue and red glass.....	86
8.2.2.1	Blue colour: Comparison with Gratuze cobalt ores	88
8.2.2.2	Red glass: Comparison with Kunicki-Goldfinger et al. (2014)	88
8.2.3	The original green and yellow glass	89
8.2.4	The original manganese-coloured glass.....	91
8.2.5	Original HLLA glass?.....	94
8.3	Non-original medieval forest glass.....	96
8.3.1	Non-original white forest glass (potash-lime)	97

8.3.2 Non-original coloured forest glass (potash-lime)	97
8.3.3 Non-original HLLA glass	100
8.4 Summary of the compositional results	100
9 Original white glass batches and their distribution in the window	103
9.1 Identification of batches using compositional data	103
9.1.1 Panel-by-panel identification	103
9.1.2 The cross-window approach	103
9.1.3 Significance of clusters	104
9.2 Distribution of batches across the panels	106
9.2.1 Row 1 panels (1e, 1h, 1j)	107
9.2.2 Panel 3b	107
9.2.3 Panel 10c	107
9.2.4 Panel 10e	107
9.2.5 Panel 10h	109
9.2.6 Panel 15a	109
9.2.7 Panel 15b	109
9.2.8 Panel 15f	111
9.2.9 Panel 15g	111
9.2.10 Panel 15h	112
9.3 Summary	112
10 Recipes and procurement of the GEW glass	115
10.1 White glass	115
10.1.1 Provenance	115
10.1.1.1 Consignments of white glass	115
10.1.2 Customer-supplier relationship	116
10.2 Coloured glass	116
10.2.1 Regional provenance	116
10.2.2 Glass-making technology	118
10.2.3 Importation of European glass to England	119
10.3 HLLA glass	120
10.4 Summary	121
11 Glass-painting and the organisation of production in John Thornton's workshop	123
11.1 The long-term progress of the glazing project	123
11.2 The glazing table as a workspace	124
11.3 The division of labour in the production of panels	126
11.3.1 Taylorism-Fordism: the assembly line model	127
11.3.2 Toyotism: the cellular model	127
11.3.3 Panel production	129
11.4 Workshop organisation	130
11.4.1 The work of John Thornton?	131
11.5 Summary	131
12 Conclusions	133
12.1 Development of a methodology	133
12.1.1 The trace element methodology	133
12.1.2 The WindoLyzer 5	134
12.2 Glass-making and procurement of the glass	134
12.3 The organisation of production in Thornton's workshop	135
12.4 A window to the past	135
Appendix A. The Great East Window of York Minster: Supplementary materials and sampling	137
A.1 The contract for the glazing of the GEW	137
A.1.1 James Torre, English version	137

A.1.2 Matthew Hutton (English translation)	137
A.2 Timeline of the GEW	137
A.3 Images and sampling	138
Appendix B. Analytical methods: Supplementary information	151
B.1 EPMA-WDS channels and crystals	151
B.2 Empirical calibrations for the pXRF analyses	152
B.2.1 Empirical calibrations for the panel 3b analyses.....	153
B.2.2 Empirical calibrations for the rows 1 and 15 analyses.....	155
B.2.3 Empirical calibrations for the row 10 analyses.....	157
Appendix C. UCL Reference Glasses AD1, AD2 and AD3, based on medieval forest glass compositions	159
C.1 Preparation of the standards.....	159
C.2 Elemental analysis by EPMA-WDS and LA-ICP-MS	159
C.3 Recommended compositions based on elemental analysis.....	161
Appendix D. Results of the chemical analyses.....	163
Appendix E. Identification of batches	209
E.1 Panel 1e	211
E.2 Panel 1h.....	212
E.3 Panel 1j.....	213
E.4 Panel 3b.....	214
E.5 Panel 10c	215
E.6 Panel 10e.....	216
E.7 Panel 10h.....	217
E.8 Panel 15a	218
E.9 Panel 15b.....	219
E.10 Panel 15f.....	220
E.11 Panel 15g.....	221
E.12 Panel 15h.....	222
References.....	223
