List of Figures	ix
List of Tables	xi
List of Abbreviations	xii
1. Introduction	1
1.1. Why review lithic residue analysis?	1
1.2. Who is this monograph for?	1
1.3. What types of archaeological residues can be found on stone tools?	1
1.4. Brief history	2
2. Current Issues in Lithic Residue Analysis	5
2.1. Formation mechanisms	5
2.2. Preservation mechanisms	5
2.3. Identification	7
2.4. Contamination	8
3. Visual Microscopy Techniques	11
3.1. Microscopy: in situ	11
3.1.1. Reflected visible light microscopy (VLM)	11
3.1.2. Laser scanning confocal microscopy (LSCM)	12
3.1.3. Scanning electron microscopy (SEM)	13
3.1.4. Combined microscopic approaches	15
3.2. Microscopy: extraction	16
3.2.1. Transmitted visible light microscopy	16
3.2.2. Stains	17
3.2.2.1. Iodine potassium iodide	17
3.2.2.2. Phloroglucinol	17
3.2.2.3. Safranin	18
3.2.2.4. Congo red	18
3.2.2.5. Picrosirius red (PSR)	18
3.2.2.6. Trypan blue	19
3.2.2.7. Rhodamine B	19
3.2.2.8. Eosin	19
3.2.2.9. Sudan III	19
3.2.2.10. Sudan IV	20
3.2.2.11. Orange G	20
3.2.2.12. Toluidine blue	20
3.2.2.13. Methylene blue	20
3.2.2.14. Wright's stain	20
3.2.3. Presumptive tests	21
3.2.3.1. Haemoglobin (Hb) crystallisation	21
3.2.3.2. Dot blot test	22
3.2.3.3. Urinalysis test strips	22
3.2.3.4. Luminol	23
4. Chemical Characterisation Techniques	25
4.1. Chemical characterisation: elemental analysis techniques	25
4.1.1. Scanning electron microscopy–energy dispersive X–ray spectroscopy (SEM–EDS)	25
4.1.2. Rutherford backscattering spectrometry (RBS)	29
4.1.3. Particle–induced X–ray emission spectroscopy (PIXE)	30
4.1.4. X–ray fluorescence spectroscopy (XRF)	31
4.1.5. Energy dispersive X–ray fluorescence spectroscopy (EDXRF)	31

4.1.6. Microscopic X-ray diffraction spectroscopy coupled with microscopic X-ray fluorescence spectroscopy (μ -XRD- μ -XRF)	32
4.1.7. Inductively coupled plasma atomic emission spectroscopy (ICP-AES)	32
4.1.8. Laser ablation inductively coupled plasma mass spectrometry (LA-ICP-MS)	33
4.2. Chemical characterisation: molecular analysis techniques	33
4.2.1. Light-based spectroscopy techniques	34
4.2.1.1. Fourier transform infrared spectroscopy (FTIR)	34
4.2.1.2. Fourier transform infrared microspectroscopy (FTIRM)	35
4.2.1.3. Raman spectroscopy	39
4.2.2. Chromatographic separation-based techniques	45
4.2.3. Mass spectrometry-based techniques	46
4.2.3.1. Gas chromatography-mass spectrometry (GC-MS)	46
4.2.3.2. Other mass spectrometry-based techniques	50
4.2.4. DNA techniques	52
4.3. Chemical characterisation: crystal structure	53
4.3.1. X-ray diffraction spectroscopy (XRD)	53
4.4. Chemical characterisation: immunological techniques for proteins	54
4.4.1. Crossover immunoelectrophoresis (CIEP)	55
4.4.2. Enzyme linked immunosorbent assay (ELISA)	55
4.4.3. Radioimmunoassay (RIA)	56
4.4.4. Concerns and limitations of immunological methods	56
4.4.5. Future work on ancient proteins	58
4.5. Chemical characterisation: summary	59
5. Methodological Critique and Possible Solutions.....	61
5.1. Improving the impact of lithic residue studies	61
5.2. Sampling	61
5.3. Use of artefacts from insecure contexts	61
5.4. Collection of sediment samples for comparison	62
5.5. Storage	62
5.6. In situ versus extractive approach	62
5.7. Cleaning	63
5.8. Residue distribution mapping	64
5.9. Problems with microscopic identification of residues by analogy	65
5.10. Presentation of visual results	65
5.11. Best practice guide for lithic residue analysis	66
5.11.1. Essential planning	66
5.11.2. Excavation	67
5.11.3. Sample selection	67
5.11.4. Storage	67
5.11.5. Prior to analysis	67
5.11.5.1. Test consumables and lab spaces	67
5.11.5.2. Artefact photography	68
5.11.5.3. Artefact cleaning (or not)	68
5.11.6. Analysis	68
5.11.6.1. Visual examination of in situ residues	68
5.11.6.2. Chemical characterisation	69
5.11.6.3. Experimental controls	69
6. Conclusion	71
Appendix	73
