List of Figures	xiii
List of Tables	xvii
Abstract	xviii
1. Introduction	1
1.1. China and its early metals.....	2
1.2. The lead problem in Chinese bronzes.....	8
1.3. How this study unfolds.....	13
2. The meaningful metal: leaded bronze in archaeological interpretation	15
2.1. Distribution of copper, tin, and lead.....	16
2.2. Creation of copper alloys.....	17
2.3. Properties of leaded bronze.....	19
2.3.1. Castability.....	20
2.3.2. Mechanical properties.....	22
2.3.3. Colour.....	24
2.3.4. Other properties.....	26
2.4. Was leaded bronze a good choice?.....	28
3. East wind, west wind: metals on the steppe frontiers	29
3.1. Steppe traditions and local adoptions.....	31
3.2. Northern Bohai Rim.....	37
3.3. Hexi Corridor before 1600 BCE.....	43
3.4. Ordos Plateau.....	50
4. Making vessels with a new material: the leaded ritual bronzes	55
4.1. From the frontiers to the Central Plains.....	57
4.2. Erlitou.....	60
4.3. Zhengzhou.....	70
4.4. Middle-Lower Yangtze.....	74
5. Beyond the Central Plains: the spread of leaded bronze	81
5.1. Anyang.....	81
5.2. Hexi Corridor after 1600 BCE.....	90
5.3. Guanzhong Basin.....	94
5.4. Lower Yangtze and the eastern coast.....	101
6. Conclusions and discussion	107
6.1. Geographical conditions and technological choices.....	107
6.2. Scenarios of using leaded bronze.....	108
6.3. Towards a Leaded Bronze Age.....	108
Appendix 1. Early metal-related sites in China	111
Appendix 2. Published chemical analyses of early copper-based objects from China	123
Appendix 3. Major metal deposits in the study area	127
Appendix 4. Abbreviations of the analytical chemistry methods	133
Bibliography	135
